

Design a New Species of Fish

There are many different kinds of fish. Each is suited to live in a different place and behave in its own special way.

In the space below, design and draw a new species of fish. First you must decide where it lives, what it eats and how it moves. Remember this will affect what it looks like e.g. If it hunts at night, it may need big eyes to help it to see better in the dark!

My new species of fish:

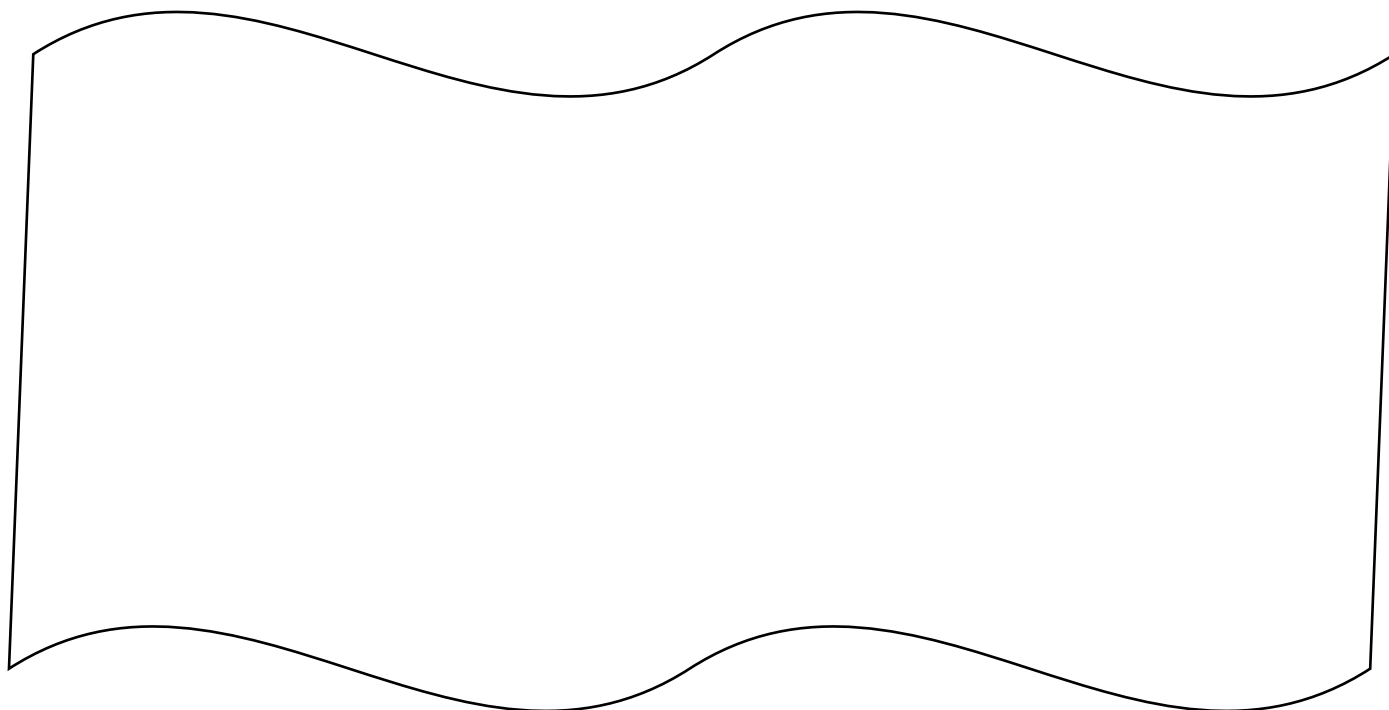

Lives _____

Eats _____

Catches its food by _____

Moves around by _____

Protects itself by _____

My new species of fish is called _____
