

# Porci's Ocean Patrol Activity Sheet

Porci wants to see what happens to the rainwater that falls around our house. Take a guess and write down what you think will happen to the water when it rains in these different places. Will it soak in, make a puddle, run off or sit on top? Then get an adult to help you experiment with a small cup of water as you pour a little bit on different surfaces outside. Watch and see if it soaks in, which will collect as groundwater underground, or sits on top, and could become stormwater that goes down the drain and makes it way to the ocean.

Surface	What do you think will happen?	What happened?
